

SCIENTIFIC LABORATORY FOR THE IDENTIFICATION AND GRADING OF DIAMONDS AND COLORED STONES EDUCATIONAL PROGRAMS

> Expertise issued by I.G.I. b.v.b.a. Head Office and Laboratories. 1/7 Schupstraat, 2018 Antwerp - Belgium Tel. (32-3) 231 68 45 (6 L.) - Fax. (32-3) 232 07 58

Number: F2C45248

LABORATORY REPORT (ORIGINAL)

DIAMOND REPORT

This report is a statement of the diamond's identity and grade including all relevant information about the submitted stone.

4 MAY 1994 ANTWERP,

TO WHOM IT MAY CONCERN.

DESCRIPTION

SHAPE AND CUT

WEIGHT: 6.22 - 6.29 x 4.03mm MEASUREMENTS:

PROPORTIONS and FINISH

Table Diameter Percentage 60 % 13.5 % Crown Height Percentage

46 % Pavilion Depth Percentage

CULET SIZE:

GIRDLETHICKNESS:

GOOD / GOOD FINISH: Polish/Sym & Prop

PROPORTIONS - MARGIN: ± 1% MEASUREMENTS - MARGIN: ± 0.02 mm.

The germological analysis of diamonds, precious stones and other minerals must be carried out by specialized germologists with many years' experience in this field who have a keen sense of the professional code of ethics governing their work as well as a thorough knowledge of crystallographic, optical and physical phenomenon.

The identification of the various species and varieties of stones, the distinction between natural and synthetic stones, as well as various treatment methods currently encountered are all very important factors.

More specifically for diamonds, the laws of refraction and dispersion of light, the related geometric data as well as knowledge of all aspects

involved in the cutting process are essential.

Definition of a stone's color requires knowledge of type Ia, Ib, Ila and Ilb diamonds, and correct use of masterstones and other relevant befinition of a stone's color requires knowledge of type Ia, Ib, Ila and Ilb diamonds, and correct use of masterstones and other relevant befinition of a stone's color requires knowledge of type Ia, Ib, Ila and Ilb diamonds, and correct use of masterstones and other relevant befinition of a stone's color requires knowledge of type Ia, Ib, Ila and Ilb diamonds, and correct use of masterstones and other relevant befinition of a stone's color requires. In order to grade the clarity of a diamond, the nature, number, size and location of any inclusions as well as any other secondary external characteristics must be determined.

This report is subject to the terms and conditions set forth on reverse.
